WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a blank 640 x 460 mm from 1 mm sheet; deburr; paint it white (or buy pre-coated white sheet and touch up the cut edges). Mark a top plate 360 mm deep and 440 mm wide in the middle of the blank. A 100 mm flap goes along its outer edge and a 100 mm flap along each side. Cut a small relief at each corner where flaps meet. Fold all three flaps 90 degrees down in a sheet folder or between hardwood blocks in the vice.

Arms: cut two 400 mm lengths of 40 x 6 mm flat bar. Bend 40 mm of one end 90 degrees over a 12 mm former; drill a 6.5 mm hole in the middle of that wall tab. Rivet the plate to the arms (two 4 mm rivets each, 100 and 250 mm from the wall end).

Fit: the tabs go on the gable wall 120 mm either side of the enclosure's centre line, the plate's top 1,480 mm above the ground, level, on two M6 screws into wall plugs. The plate stands 130 mm above the box and clears the siren by about 60 mm.

Check: the door swings fully open under the front flap; the shade is level.
