WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two. Cut 739 mm lengths of DN25 (33.7 mm outside) galvanized steel pipe; square both ends with a file and deburr inside and out.

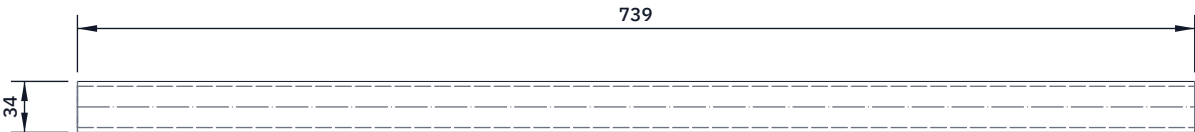

No threads and no holes: the flange grips the pipe with its set screws and the U-bolts clamp it at the mast.

Paint the cut ends with zinc-rich paint.

Fit: one end goes 45 mm into the flange hub (to its stop) and the set screws are tightened; the pipe then runs past the mast, which it passes 6 mm to the side of, and ends 50 mm beyond the mast's line.

Fit a plastic end cap on the outer end.

Check: length 739 mm within 2 mm; both ends square.
