WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

A short rectangular tube that shades the sensor window without cutting into its 55 x 35 degree view.

Cut a cross-shaped blank: a 30 x 20 mm centre opening edged by four 19 mm sides (two 30 mm wide, two 20 mm wide), plus a 11 mm flange on the outer end of the top and bottom sides.

Fold the four sides 90 degrees to make a tube 28 mm wide and 18 mm tall inside, 20 mm deep; fold the two flanges 90 degrees outward.

Drill a 3.4 mm hole in the middle of each flange.

Fit: the flanges lie flat on the west wall of the pod, the opening centred on the window, wide side horizontal; two M3 stainless screws into the tapped holes.

Check: from the window, the inside edges are at least 31 degrees off the axis sideways and 19 degrees up and down.
