WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 120 x 70 mm from 6 mm plate; deburr. Mark a centre cross; the long centre line is the pod's axis (it points along the gutter).

Pivot: one 8.5 mm hole at the centre.

Pod bolts: two holes on the long centre line, 30 mm each side of centre; drill 5 mm and tap M6.

Slot: a curved slot 6.5 mm wide on a 35 mm radius about the centre, from 25 to 49 degrees off the long centre line, on the side away from the house and toward the pod's east (back) end. Chain drill and file.

The front pod's plate and the back pod's plate are mirror images.

Fit: the pod stands on two spacers on this plate; the plate turns on the arm's pivot bolt and the slot bolt locks the aim (10 degrees toward the house).

Check: the pod bolts screw in by hand.
